

# Instruction Manual

## Contents ...

1 x background foil: Transparent Foil with borders of the European Countries.

1 x Sticker foil: Individually removable Country Stickers.

## Attachment of the background foil ...

Carefully detach the Background Foil and stick it on the required surface (either inside or outside) in the desired position.

The selected surface should be cleaned thoroughly beforehand.

## Detachment of the Country Stickers ...

Carefully peel off the visited country from the Sticker Foil.

Only hold the sticker by a corner, so that the sticking effect is not damaged.

## Attachment of the Country Sticker ...

With the help of the black boarder lines, simply stick the appropriate Country Sticker in the correct position on the background foil.

The desired position should be cleaned with a solvent- free cleaning agent beforehand (fat-free and dry).

# Tips for the attachment of the background foil

The attachment of the Europasticker Background Foil does not require any supernatural skills - quite the opposite. The two most common methods are dry or wet sticking. Here are a few more instructions and tips to help you on your way.

## Dry sticking ...

- Before the detachment of the Background Foil, position it as precisely as possible. Fix the complete sticker sheet in the provisionally desired position with adhesive tape.
- Peel off a small piece of the corner from the background sticker, and press it onto the surface. It's best to choose one of the upper corners, so that the Backing Sheet can be pulled down from top to bottom.
- Work from top to bottom - and tending to work from the middle to the outside. Always loosen only a small piece of the Backing Sheet at a time, by pulling it downwards. In this way, you can avoid the foil from wrinkling, and any airbubbles can easily be removed.
- Basically, no Tools are needed for this method. However, a plastic spatula can be useful to flatten any wrinkles in the foil.

## Wet sticking (our recommendation) ...

- You need the following tools: Water, detergent, a spray, a plastic spatula. This is how it works:
  - Fill the spray with water and add detergent (2 - 3 drops of detergent to 1 liter of water). Mix well.
  - Spray the mixture on the intended area. Do not use too much liquid! A fine film covering the whole area is sufficient.
  - Peel off the Background Foil from the Backing Sheet completely and lay it flat on the sprayed surface.
  - The Background Foil can now be easily moved in any direction.
  - Press out the liquid between the sticker and the surface. To do this, stroke the spatula from the centre towards the nearest edge. Do not press too hard, and make sure the spatula is wet. Gradually the liquid disperses, and the Sticker sticks with its full effect.
  - If you decide to use this method, allow at least 24hrs before washing the camper.
- With both methods, you can prick any small remaining airbubbles with a fine needle, and for example, press them out with your fingernail.

## Cleaning ...

Generally, we would ask you, especially when using a high pressure cleaner, not to use the water jet too closely or too directly on the Sticker. We stand behind our quality, but with today's technology, everything has its limits. Thank you!
